Art Unit: 2178

DETAILED ACTION

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: the "tag" (Claim 19, Line 2 and Claim 20, Line 1) and the "text description" (Claim 19, Lines 2-3).

Claim Objections

Claim 14 objected to because of the following informalities:

 the term "deceasing" in Line 9 should be amended to — decreasing — because it appears to be a typographic error.

Claim 20 objected to because of the following informalities:

 the term "an" in Line 1 should be amended to — a — so that the claim reads more clearly.

Appropriate correction is required.

Application/Control Number: 09/699,806 Page 3

Art Unit: 2178

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 and 6-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Ferrel et al., U.S. Patent No. 5,860,073.

Claim 1:

Ferrel discloses a method of electronically rendering data on a computer readable medium (see Figure 6), comprising:

- receiving one or more text objects (382, Figure 6) and floating objects (390, Figure 6);
- generating floating areas to house the floating objects ("floating areas" are generated to house floating objects 390 and 392 in Figure 6);
- outputting the floating areas at predetermined locations (see Column 17, Lines 57-60);
- generating one or more textual areas to house the text objects, the textual areas
 comprising an outputted area where the floating areas have been removed
 ("textual areas" are generated to house text objects 382 and 386 in Figure 6;
 these "textual areas" comprised an outputted area where the floating areas "have
 been removed" in that the textual areas are located wherever the "floating areas"
 are not located); and

Art Unit: 2178

• outputting the textual areas adjacent to the floating areas (see Figure 6).

Page 4

Claim 2:

Ferrel discloses the method of claim 1, further comprising:

linking the textual areas creating a linked list of textual areas; and

sequentially inserting the text objects into the linked list starting at a head of the

list (see Figures 7 and 8; see Column 17, Line 61 through Column 20, Line 62 -

the "textual areas" are linked to the respective "text objects" which are

"sequentially inserted" into the "linked list" as specified through the project editor).

Claim 3:

Ferrel discloses the method of claim 1, further comprising:

linking the floating areas creating a linked list of floating areas; and

sequentially inserting the floating objects into the linked list starting at a head of

the list (see Figures 7 and 8; see Column 17, Line 61 through Column 20, Line

62 - the "floating areas" are linked to the respective "floating objects" which are

"sequentially inserted" into the "linked list" as specified through the project editor).

Claim 4:

Ferrel discloses the method of claim 1, wherein the floating areas and the textual

areas are generated by forming geometric rectangles (see Figure 8).

Art Unit: 2178

Claim 6:

Ferrel discloses the method of claim 1, further comprising:

 displaying the outputted floating areas and textual areas within a viewer (the "outputted" floating areas and textual areas are displayed "within a viewer" in that

the user views the web page using a browser on a computer monitor).

Claims 7-11:

These claims are for a "system" that performs the method of Claims 1-4 and 6.

Thus, these claims are rejected using the same rationale.

Claim 12:

The system of claim 11, wherein the defining is done by tagging the text objects

and the floating objects with a markup language (see Column 2, Lines 5-17).

Claim 13:

The system of claim 12 wherein the markup language is at least one of extended

markup language, extended style sheets language, and portable document format (see

Column 2, Lines 37-47).

Art Unit: 2178

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5 and 14-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferrel et al., U.S. Patent No. 5,860,073.

Claim 5:

As indicated in the above discussion, Ferrel discloses every element of Claim 4.

Ferrel fails to expressly disclose two adjacent rectangles representing textual areas that are merged into a single rectangle. However, Ferrel does disclose "textual areas" and "floating areas" (see Figure 8) into which "text objects" and "floating objects" can be poured. Ferrel also discloses amending the "textual areas" and "floating areas" of a style sheet with an editor (see Column 27, Line 37 through Column 28, Line 51) for the purpose of modifying the appearance of web pages.

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the method of electronically rendering data on a computer readable medium, disclosed in Ferrel, to include the step of merging two adjacent rectangles representing textual areas into a single rectangle for the purpose of modifying the appearance of web pages, as taught by Ferrel.

Art Unit: 2178

Claim 14:

Ferrel discloses a method of electronically providing for a footnote body on a page (see Figures 6, 8 and 9), comprising:

- receiving one or more page objects including reference objects (380 and 384,
 Figure 6) and body objects (382 and 386, Figure 6);
- generating a body area located at the bottom of a page to house the body objects ("body areas" are generated at the "bottom" of a page to house body objects 382 and 386 in Figure 6);
- generating a reference area located above the body area to house the reference objects (a "reference area" located "above" the "body area" is generated to house reference objects 380 and 384 in Figure 6); and
- forming a reference geométric rectangle representing the reference area and a body geometric rectangle representing the body area (see Figure 8).

Ferrel fails to expressly disclose:

 expanding an area of the body geometric rectangle to accommodate an additional body object while deceasing a second area of the reference area maintaining an overall area associated with the page.

However, Ferrel teaches "body areas" and "reference areas" (see Figure 8) into which "body objects" and "reference objects" can be poured. Ferrel also teaches amending the "body areas" and "reference areas" of a style sheet with an editor (see Column 27, Line 37 through Column 28, Line 51) for the purpose of insuring that a reference object

Art Unit: 2178

Page 8

was properly displayed. Moreover, it was well-known by one of ordinary skill in the art of document processing at the time the invention was made to adjust "body areas" and "reference areas" of a page in the document (see Hayashi et al., U.S. Patent No. 5,600,771 – Column 1, Lines 11-50) in order to include a footnote reference on the same page that it is cited.

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the method of electronically providing for a footnote body on a page, disclosed in Ferrel, to include the step of expanding an area of the body geometric rectangle to accommodate an additional body object while deceasing a second area of the reference area maintaining an overall area associated with the page for the purpose of insuring that a reference object was properly displayed, as taught by Ferrel.

Claim 15:

Ferrel discloses the method of claim 14, further comprising:

 displaying the reference geometric rectangle area and the body geometric rectangle area in a browser (see Figure 6).

Claim 16:

Ferrel discloses the method of claim 14, further comprising:

Art Unit: 2178

 delivering the page including the reference geometric rectangle area and the body geometric rectangle area to at least one of a browser and a printer in a markup language defining the page (see Figure 6).

Claim 17:

Ferrel discloses the method of claim 16, wherein the markup language is at least one of extended markup language, extended style sheets language, and portable document format (see Column 2, Lines 37-47).

Claim 18:

Ferrel discloses the method of claim 16, wherein the delivering the page occurs as reference objects and body objects are piped to a set of executable instructions operable to insert the markup language representing a displayed page (this automatically occurs because the reference invention operates on a computer).

Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ferrel et al., U.S. Patent No. 5,860,073, in view of Cuan et al., U.S. Patent No. 4,503,515.

Claim 19:

As indicated in the above discussion, Ferrel discloses every element of Claim 14.

Ferrel also discloses objects that are "reference objects" (see Table 2 in Column 23).

Art Unit: 2178

Ferrel fails to expressly disclose:

 associating automatically a reference tag of the reference object with a text description of the body object.

Cuan teaches:

 associating automatically a reference tag of the reference object with a text description of the body object (see Figures 1-7),

for the purposes of providing a smooth flow of information to a reader at different locations within a document and managing footnotes upon printout (see Column 1, Line 26 through Column 2, Line 35).

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the method of electronically providing for a footnote body on a page, disclosed in Ferrel, to include the step of associating automatically a reference tag of the reference object with a text description of the body object for the purposes of providing a smooth flow of information to a reader at different locations within a document and managing footnotes upon printout, as taught by Cuan.

Claim 20:

Ferrel fails to expressly disclose a reference tag that is a numeric character which is automatically incremented with each new reference tag.

Cuan teaches a reference tag that is a numeric character which is automatically incremented with each new reference tag (see Figures 1-7 and Column 1, Line 26

Art Unit: 2178

through Column 2, Line 35) for the purposes of providing automatic footnote numbering and updating (see Column 1, Line 26 through Column 2, Line 35).

Accordingly, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the method of electronically providing for a footnote body on a page, disclosed in Ferrel, to include the step of providing a reference tag that is a numeric character which is automatically incremented with each new reference tag for the purposes of providing automatic footnote numbering and updating, as taught by Cuan.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: Arora et al., U.S. Patent No. 5,845,299; Tyan et al., U.S. Patent No. 5,893,127; Burch et al., U.S. Patent No. 6,088,708; and Wolfe, U.S. Patent No. 5,870770.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Doug Hutton whose telephone number is (703) 305-1701. The examiner can normally be reached on Monday-Friday from 8:00 AM to 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Heather Herndon, can be reached at (703) 308-5186. The fax phone number for the organization where this application or proceeding is assigned is (703) 746-7239.
